

Beatrice Concrete Company Highway 2 Plant

Sufficiently Efficient

This batch plant was supplying quality ready-mix concrete for Beatrice Concrete just six weeks from the day construction began. The facility has the capability of batching concrete without an operator present. Mix designs can be sent to the plant via the Internet and this plant will automatically batch the appropriate mix, ready for the truck driver to haul away. Cost saving amenities include underground aggregate storage to help reduce waste and material handling costs.

Project Details
