

Excel Corporation Re-Roof, Phase III

Covering Ground

The next step in the continuing mechanical retrofits for the Excel Corporation, this pre-engineered metal building continued the work Ayars & Ayars, Inc. had begun in phases 1 and 2. Due to the size of the existing facility, it was impractical to use standard cranes for this building erection; the challenge was met using a helicopter to airlift and set the building's main frames. We specialize in creative solutions to challenging projects.

Project Details

➤ Schuyler, Nebraska

➤ 23,040 sf

➤ Pre-Engineered Metal Building

➤ Project Completed: 1999

➤ Ayars & Ayars employees are the companies future. Our safety training is an insurance policy on that future.
