First Presbyterian Church

A Solid Rock

A pre-engineered metal building was the solution for First Presbyterian Church: using architectural panels on the roof contribute to the overall attractiveness and functionality of the building. The combination of a brick exterior and gable roof give the facility the look and feel of a traditional church and focuses attention on worship. Additional space was also created for offices and meeting rooms.

Project Details

➤ Cedar Bluffs, Nebraska

➤ 7,200 sf

➤ Pre-Engineered Metal Building

➤ Project Completion: 1989

➤ Presbyterians trace their history to the 16th century and the Protestant Reformation.
