

BNSF Parking Lot Expansion

More Lot Space

Because BNSF and Ayars & Ayars, Inc. have worked on multiple projects together, it was an easy decision for them to choose us once again. This time it was to discuss extending their current parking lot by 15,000 sq. ft. at their Fridley, MN location. This project is essential to be able to account for the large number of commuters that come and go each day. We designed an underground storm water containment system to manage several acres of upstream storm water runoff. Scope of work included: engineering and design, excavation, chamber system and storm sewer installation, paving and creating a new parking layout for an efficient traffic flow and increased number of parking spots.

Project Details

➤ Location:
Fridley, Minnesota

➤ Size:
15,000 sq. ft.

➤ Type of Construction:
Special Project Group

➤ Project Completion:
Spring 2017

➤ BNSF is a critical link that connects consumers with the global marketplace.
