

Garner Industries Addition

Just Like Old Times

Ayars & Ayars, Inc. has been building lasting relationships for over 30 years and continues to do so today. Garner Industries is a prime example of one of those great connections. After partnering with us in 2001 to build their current facility, Garner knew who to choose when it was time to expand again. The look of this 40,000 sq. ft. addition will match the existing tilt-up concrete building. The new space will house Garner Industries plastic injection molding tools and materials, along with their manufacturing operations.
