Keeping Kids First Daycare

Secure and Sound Proof

Ayars & Ayars, Inc's third project in the North Creek development, Keeping Kids First Childcare, utilized ICF construction. Insulating concrete forms (ICFs) are rigid plastic foam forms that hold concrete in place during curing and remain in place afterwards to serve as thermal insulation for concrete walls. The foam sections are lightweight and result in energy-efficient, durable construction. ICFs can be used to form various structural configurations, such as a standard wall, post and beam, or grid.

Project Details

- Location:
Lincoln, Nebraska
- Size:
9,600 sq. ft.
- Type of Construction:
Insulated Concrete Form (ICF)
- Project Completion:
2005
- Keeping Kids First's 2nd location.
