reEnergize

For the Future

Funded by a grant from the U.S. Department of Energy's BetterBuildings Program, the reEnergize Program is a collaborative effort between the cities of Omaha and Lincoln to build energy smart communities. Our plan is to work with highly qualified contractors to complete energy evaluations on a total of 263 commercial and nonprofit buildings and make energy upgrades on 3,193 residences throughout the five stages of the program. With this opportunity, the reEnergize Program will serve as a catalyst, intending to build consumer demand and contractor supply for energy-saving building improvements and to reduce energy use in local buildings.

Project Details

➤ Location:
Omaha, Nebraska
Lincoln, Nebraska

➤ Size:
263 Commercial Buildings
3,193 Residences

➤ Type of Construction:
Energy Retrofit Program

➤ Project Completion:
2013

➤ The reEnergize Program will allow Omaha and Lincoln to become regional leaders in energy saving practices.
