Breaking New Ground

Ayars & Ayars, Inc. has been building lasting relationships ever since we opened our doors in 1985. We are customarily a commercial construction company, but because of our relationship with a client and our partnership with LiteForm® Technologies, this project was a perfect fit. A preassembled insulated concrete 'ICF' block, also known as FlexxBlock, was used to construct this multi-story residence. By using FlexxBlock, the owner saved on shipping costs because of the lightweight ICF's and will save more on heating and cooling costs in the future because of the high performance R-values that are provided by this technology.

Project Details

Location:
Fremont, Nebraska

Size:
6,502 sq. ft.

Type of Construction:
Insulated Concrete Form (ICF)

Project Completion:
2017

Arps Red-E-Mix supplies
concrete and related products to
towns and cities in Nebraska.
