Monsanto Dryer Foundations

Faster and Better

Ayars & Ayars, Inc. vision is that innovative, leading edge technologies and processes enable higher quality construction and faster project completion. The latest example of this commitment, a smaller, more nimble laser screed, made its debut on the Monsanto dryer foundations project. This tool, along side our larger screed, affords us greater flexibility for high quality concrete placement. The advantages for our clients: superior craftsmanship, faster occupancy and strong, durable buildings.
