Bayer Ag Equipment

Eager to Expand

Our team was excited to begin work when Bayer Ag Equipment asked us to design and build a new building in Glyndon, MN. The 9,600 sq. ft. building features a Butler MR - 24 Standing Seam Roof System with 24-inch-wide roof panels fabricated from 24 gauge steel. The building also has three-high sectional overhead doors for flexible access into and out of the facility. Our scope of work for the project included sitework, concrete, metals and finishes.

Project Details

➤ Location:
Glyndon, MN

➤ Size:
9,600 sq. ft.

➤ Type of Construction:
Pre-Engineered Metal Building
