330 West P St. - Concrete Overlay

Put it on Top!

We teamed up with Speedway Properties to complete a concrete overlay project. Crews removed, hauled off, and disposed of selective sidewalk, existing asphalt, and existing bumpers around the parking lot. They then installed an average of 6" of concrete paving over the remaining asphalt, 4" thick concrete sidewalk, and completed striping of the entire parking lot and handicap stalls. Our final scope of work for this project included furnishing and installing soil and seeding around the perimeter of the parking lot.

Project Details

Location:
Lincoln, Nebraska

Size:
46,000 sq. ft.

Type of Construction:
Concrete Overlay

Project Completion:
2020

A concrete overlay is a concrete cement based product that goes over existing concrete for repair or decorative reasons.
