First State Bank Nebraska

New and Improved

With the complete demolition of the existing building and surrounding sitework, we have cleared the way for a striking new 6,200 sq. ft. single-story bank with an integrated drive-thru. The building showcases a blend of tilt-up and conventional steel frame construction, offering both strength and architectural appeal. Its exterior is thoughtfully designed with textured painted concrete panels, sleek anodized aluminum storefronts, modern aluminum canopies, elegant stone veneer, and two distinctive types of architectural metal panels—creating a dynamic and contemporary visual statement. We're proud to continue our longstanding relationship with First State Bank, bringing their vision to life once again.
